

```
graph TD; Entry(( )) --> Loop[sos_state = START]; Loop --> Entry;
```

sos_state = START

The diagram shows a flowchart within a dashed rectangular border. A light blue rectangular block is at the top center. A black arrow points down from this block to a text label 'sos_state = START'. From the left side of this label, a curved black arrow loops back up and to the left, pointing towards the top of the dashed box, indicating a loop or a return to the start of the process.
